

# TRAINING TOWER

Our Four Story Expandable Training Tower provides 4160 square feet of interior training space. The unit is equipped with a flat and pitched roof, exterior decks on two levels and a balcony across the front of the entire structure. The facility includes an interior staircase to each level and provides two burn rooms for live fire training. The roof includes safety rails and two cutting locations.

The units training capabilities include, but are not limited to interior and exterior fire attack, ventilation (vertical and horizontal), search and rescue, direct/indirect attack and forcible entry.

The unit is designed for basic firefighter training as well as providing ongoing training for the seasoned veteran. It is built with skill testing capabilities that meet Firefighter I training requirements for basic firefighting skills addressed in the NFPA 1001.

This unit is equipped with a flashover/rollover prop and an integrated smoke system. The prop utilizes Liquid Petroleum Gas (LPG) in vapor state as the fuel source.
